

CLAIMS

1. Process process for producing by blow-moulding a multilayer film containing at least a polyamide layer and a polyolefin layer, characterized in that a  
5 branched polyamide is used as polyamide.
2. Process according to claim 1 wherein the polyolefin layer consists essentially of LLDPE.
3. Process according to claim 2 wherein the LLDPE contains at most 5% of another polyethylene.
- 10 4. Process according to claim 1 wherein the polyolefin layer consists essentially of polypropylene.
5. Multilayer film containing at least a polyamide layer and a polyolefin layer directly connected thereto or connected thereto by an adhesive layer, characterized in that the polyamide is a branched polyamide.
- 15 6. Multilayer film according to claim 5 wherein one or more polyolefin layers are polyethylene layers, which polyethylene layers, other than adhesive layers, if present, contain only polyethylene which is at least 95% linear low-density polyethylene.
7. Multilayer film according to claim 5, wherein the polyolefin layer consists  
20 essentially of polypropylene.
